

Classic-Style Body

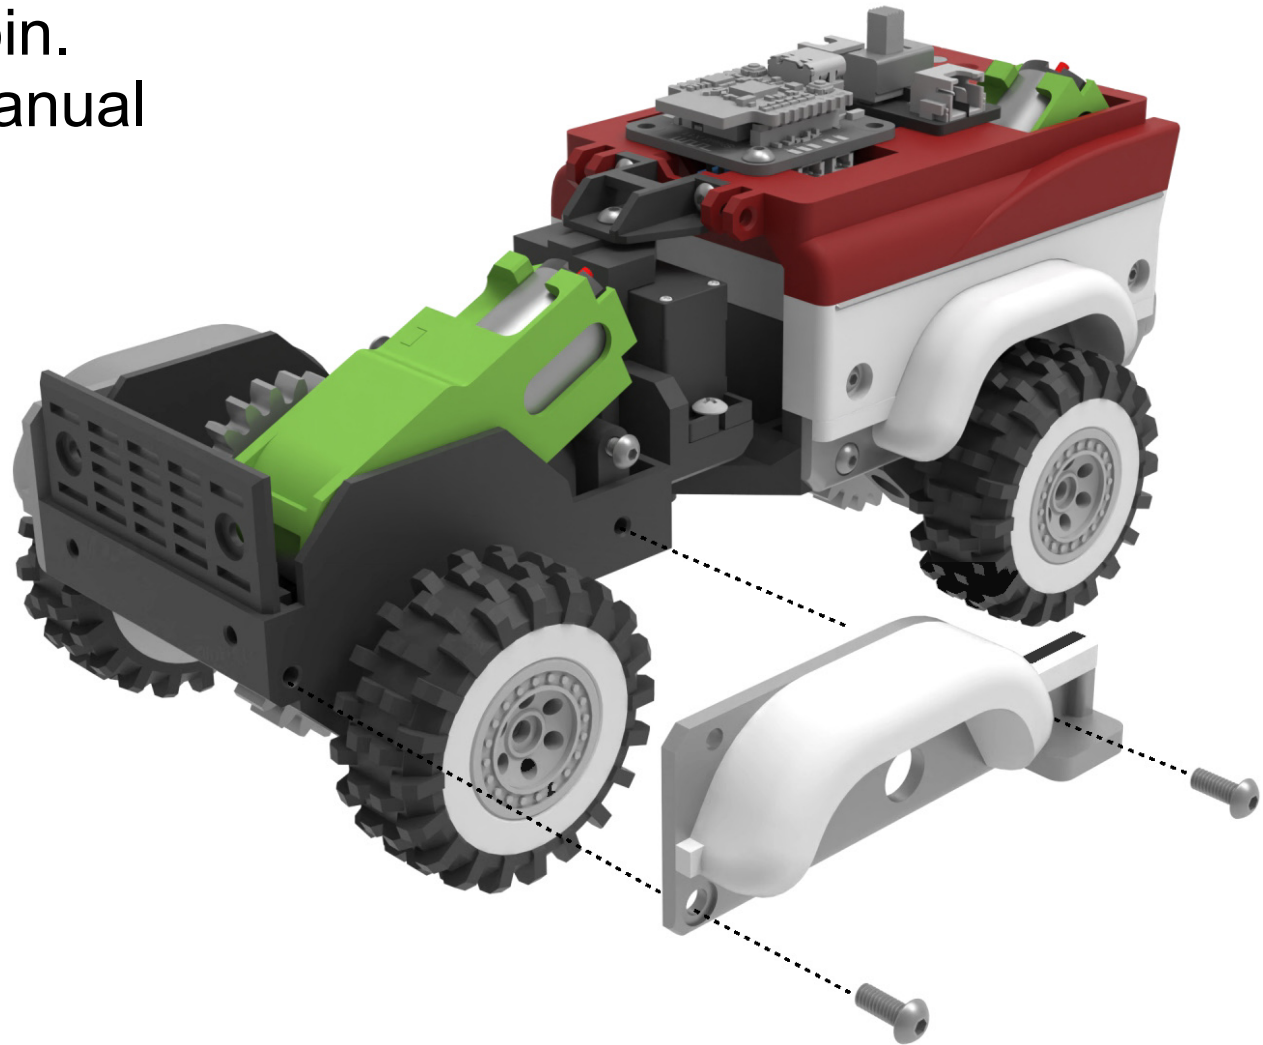

Notes & Setup

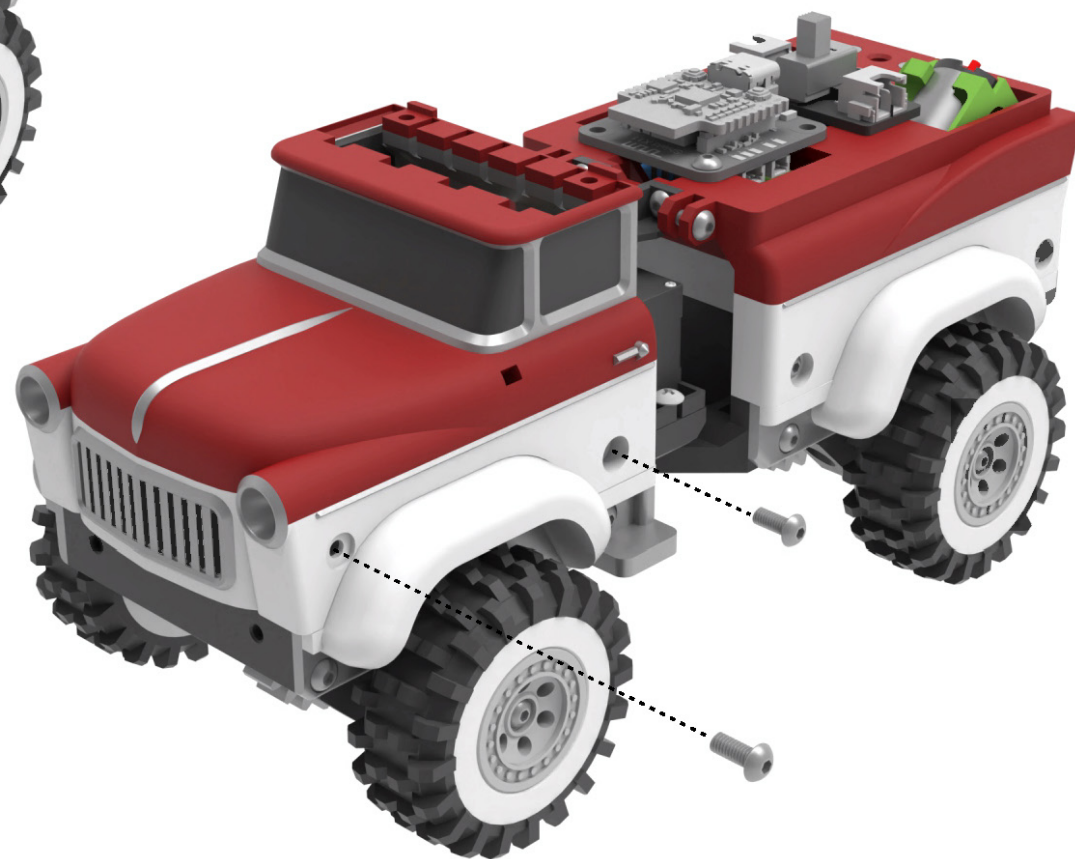

Multi-color print: This body is different from the others — the final stretch goal is prepared for 4-color printing out of the box. You can change the colors or merge parts if needed.

Materials: The print profile shows what I used (PLA) and it's great for indoor use. For outdoor use, I recommend PETG for better heat/UV/moisture resistance.

Wheels/Tires compatibility: This body has its own wheel & tire set designed specifically for it. These are not compatible with the other wheel options.

Front fenders first: install the front arches/fenders before mounting the cabin.
The next steps in this manual show the order clearly.

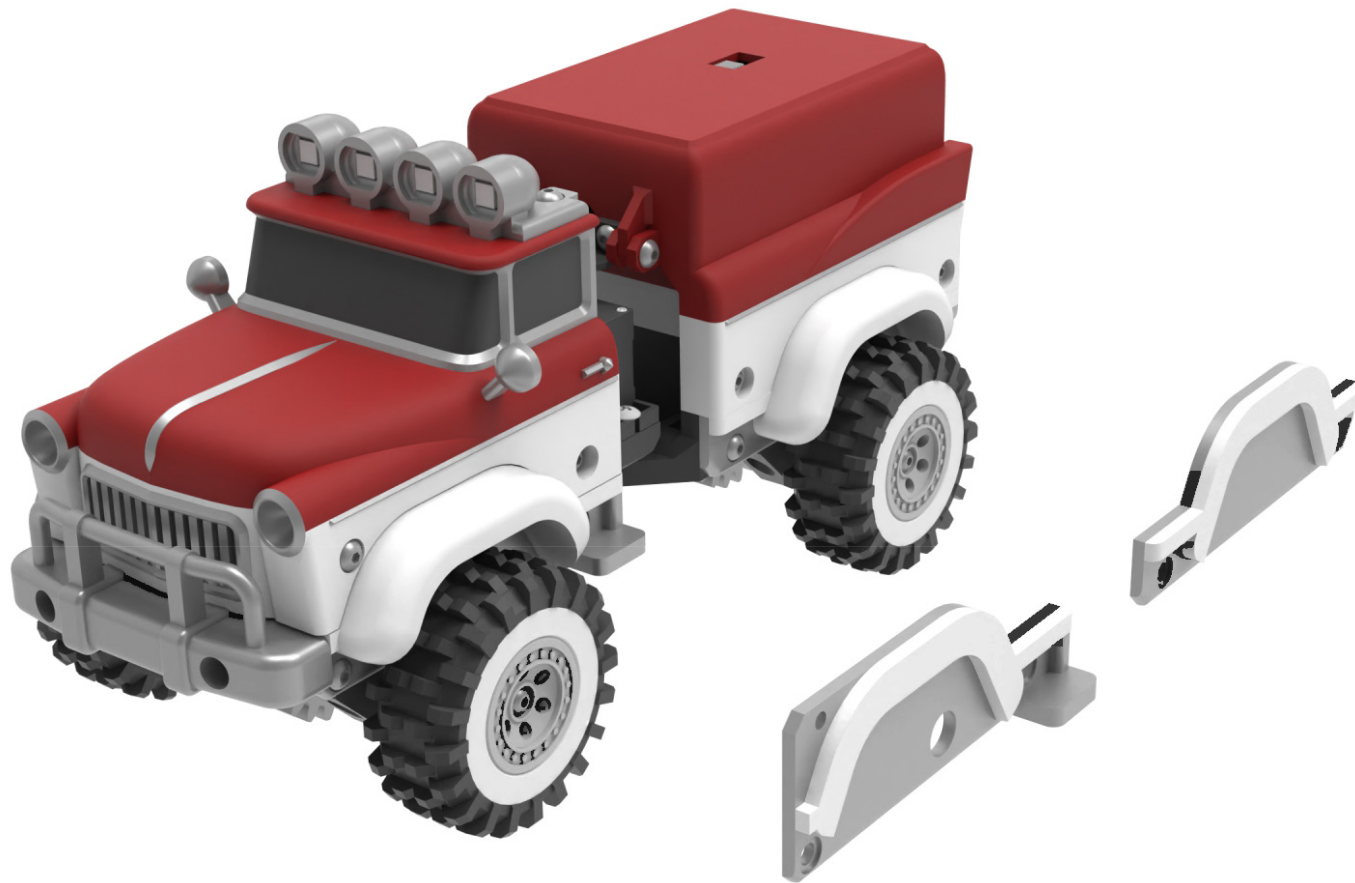

Mirrors: the mirrors are a snug fit.
If needed, secure them with
a small drop of CA (instant glue).

Large tires: when using the big-tire setup, install the special fenders/arches marked “BT” in the part name.
