

Military-Style Body — Installation Notes

The military body **replaces** the stock body. In the print profile I've included **only the parts you need to swap**, so you don't reprint the entire truck.

Assembly is the **same as the stock build**, so you shouldn't run into any issues.

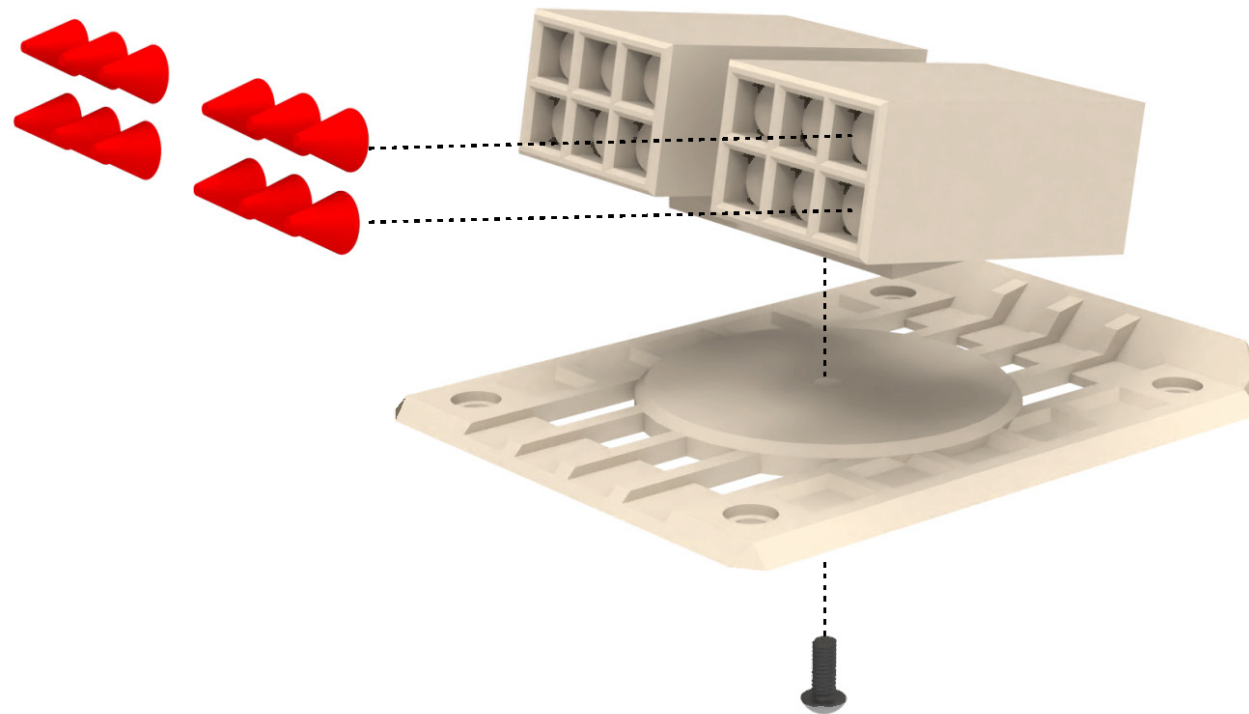

You have two roof options:

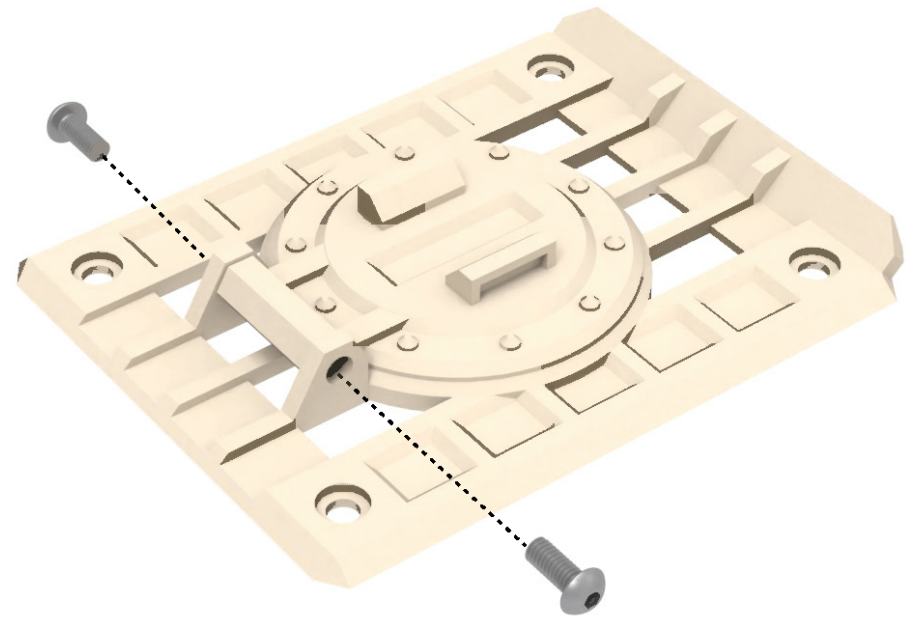

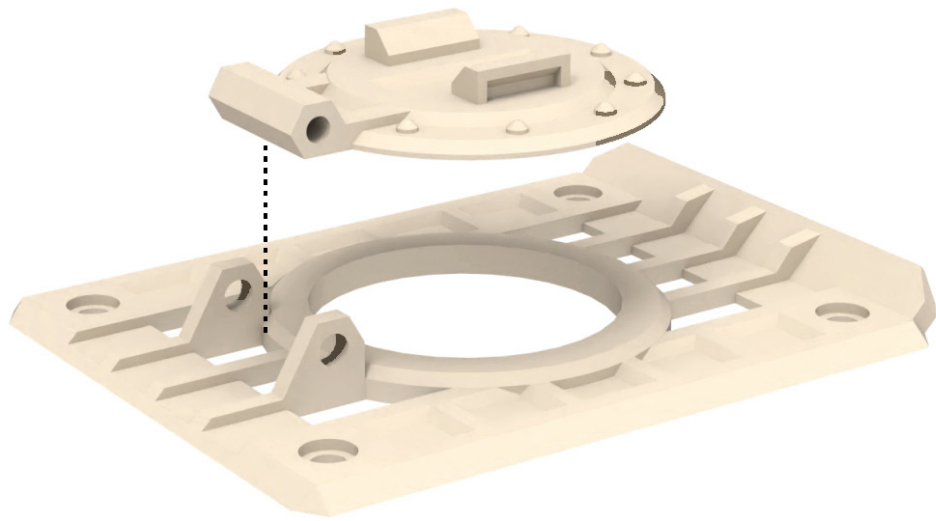

With rocket launcher, or

With hatch.

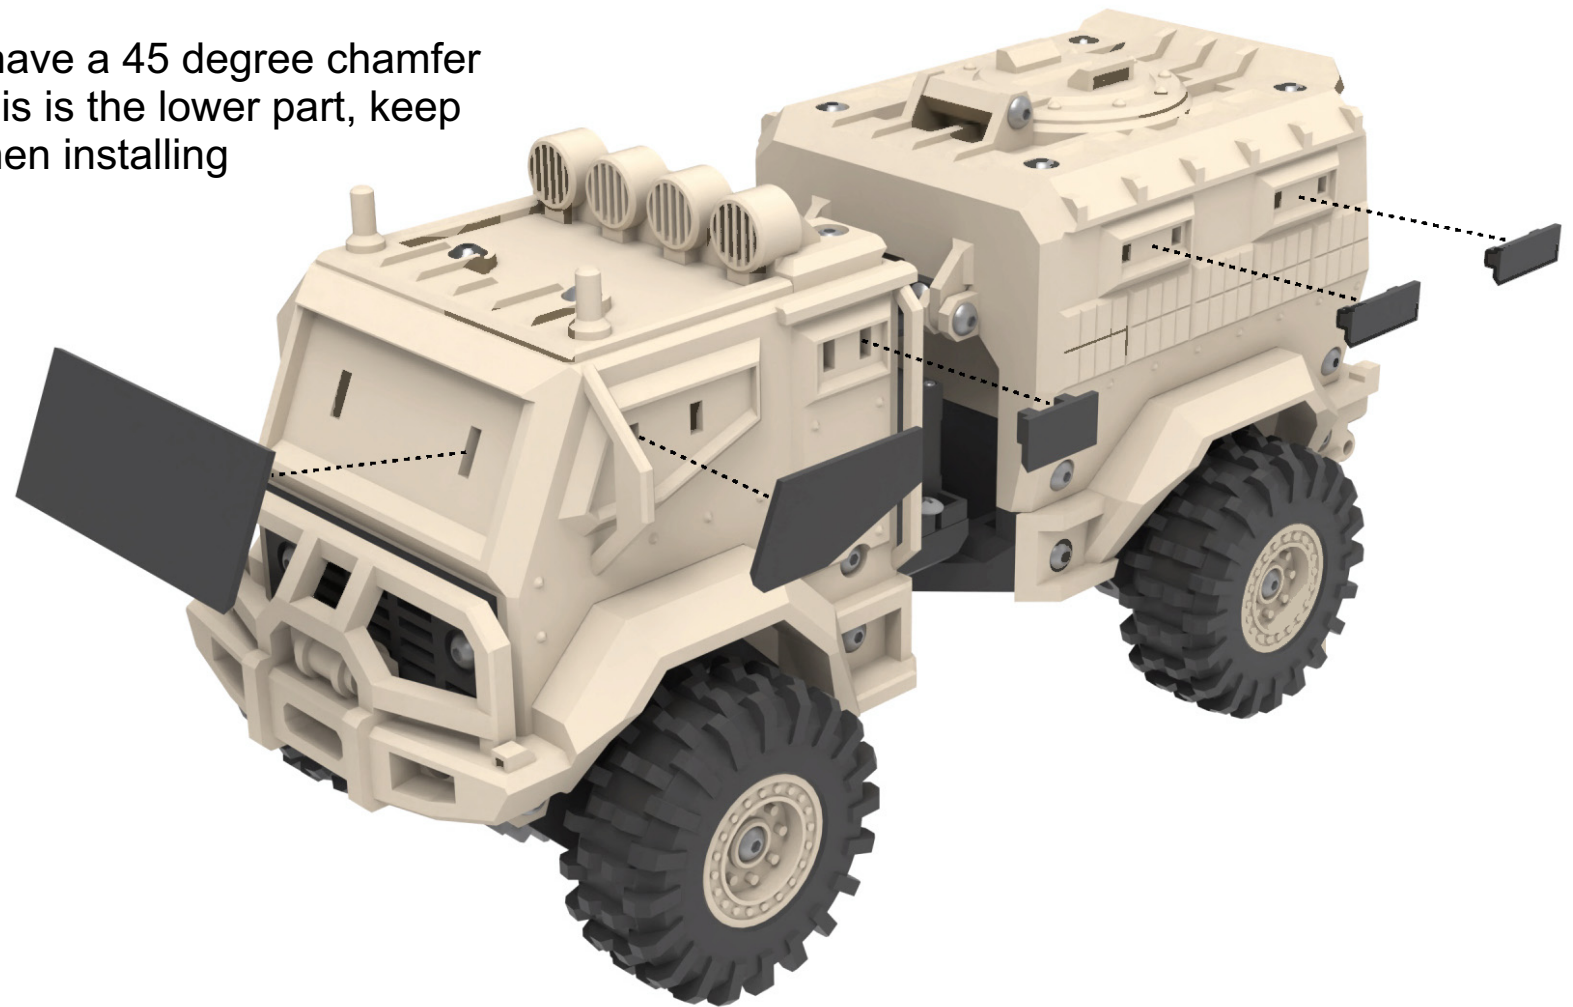

Both are labeled in the print profile — simply choose the one you prefer and proceed with assembly.

The rocket noses fit tightly without glue. Use a small screwdriver to press them into the corners during installation.

The windows have a 45 degree chamfer on one side, this is the lower part, keep this in mind when installing
